Signs is a new modern and multipurpose typeface designed by Maximage. It was inspired by mid-20th-century typefaces designed for signage and used in the architecture industry. Composed of 8 weights ranging from thin to black, it offers a fully functional family combining simplicity and visual impact. Signs is a legible typeface designed to be simultaneously eye-catching from afar and to look exceedingly sharp up close.

Signs Rounded has been released in 2023; a variable version allow you to switch from Signs to Signs Rounded.

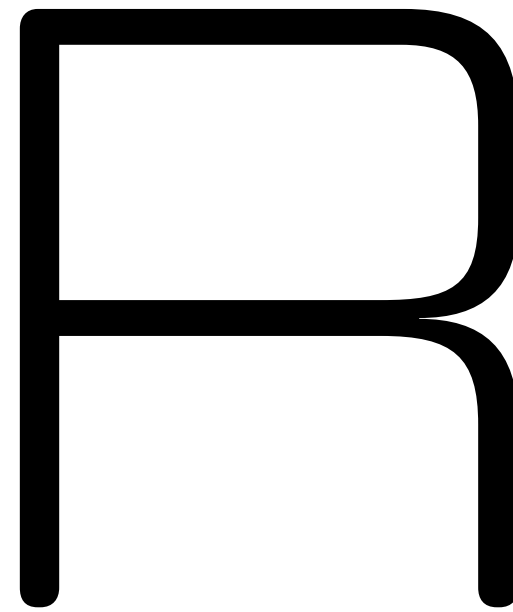

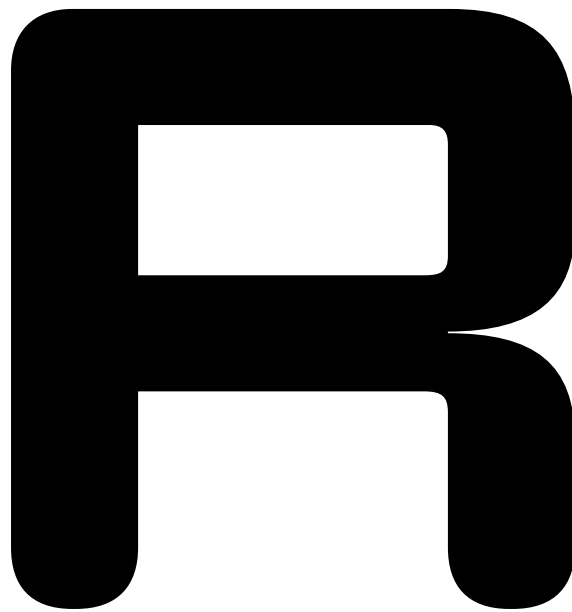

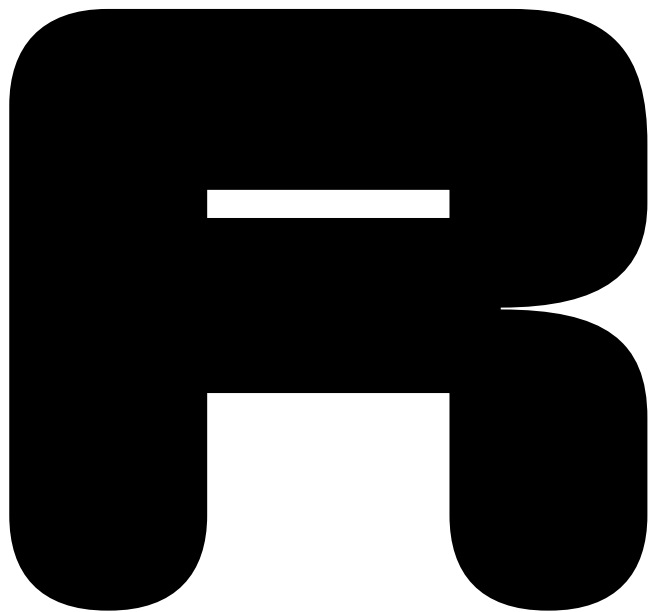

Prölss's publication *Schriften für Architekten* (1957) inspired a study of this typeface genre. It led to an exploration of the relation between form and counter-form which is at the core of the design. Angular counters respond to the letter's external curves and do so differently for each weight. The forms and counter-forms of the Thin and Black versions are perfectly inverted. The Light and Ultra Light weights offer razor-sharp positive and negative forms. The width of the Medium and Regular weights is adapted, and both offer rounder counter-shapes that recall some aspects of Aldo Novarese's *Microgramma*. This makes them just as suitable for text use and captions at smaller sizes. The Bold cut is a detailed exploration of the balance between square counters and organic curves. Finally, the Black is spaced and kerned tightly to create a masterful rhythmic interaction between glyph spacing and counter-shapes, which makes it perfect for typesetting in blocks to the strongest impact.

Maximage adjusted the uppercase letters to have slightly extended proportions. This allows them to work together powerfully as a title case. As such, Signs offers a contemporary reinterpretation of historical super-extended typefaces such as *Zuerich*, designed by Alex Stocker and Hans Gruber. This unreleased font appeared in various publications including Haab, Stocker and Haettenschweiler's *Lettera 1* (1954), Prölss's *Schriften für Architekten* (1957) and in a more complete version in Alazard and Hébert's *De la fenêtre au pan de verre dans l'œuvre de Le Corbusier* (1961). This influential typeface was based on a very simple construction: angular counter-shapes worked against balanced curves to create clean letters with a strong impact. The new visual language created by the combination of a super-extended uppercase and the tension between angles and curves made it ideal for modernist architecture, including external signage and plans.

Signs' hard edges and strict demeanour go against the grain: a world apart from the overly friendly faces, Signs is designed to feel transparent and straight-to-the-point. It takes its strong and recognisable architectural foundation and propels it forward, making it ideal for contemporary use. The character set includes extensive symbols which have been conceived to work well on both print and screen. Its applications are far-ranging. Signs works on the cover of a fashion magazine, on techno club flyers or in a sports brand universe. But it would be equally at home on the face of a mechanical watch, in the logo of a Japanese fashion label or in the world of moving image—from the credits of a Hollywood film to the titles of drill music videos.

Signs Rounded Thin 9 pt

Traditionally, text has been composed to serve as a vessel for the written word. It is a medium that can carry ideas and thoughts, expressing them with clarity and precision. To achieve this, text typography aims to create a readable, coherent, and aesthetically pleasing typeface that works invisibly, without distracting the reader from the message. One of the primary goals of text typography is to achieve an even distribution of typeset material, which means that the text is arranged in such a way as to minimize distractions and anomalies. The ultimate goal is to create a sense of clarity and transparency, allowing the reader to focus on the meaning and content of the text rather than the form. The choice of typeface(s) is the primary aspect of text typography. Both Maxitype and Swiss typography emphasized the importance of typography in effective communication. They recognized that typography plays a crucial role in shaping the reader's experience and understanding of the text. For example, the Maxitype typeface's clean and simple design made it easier for readers to focus on the content of the text without distractions, while Swiss typography's use of grid systems and minimalist designs helped to create a clear hierarchy of information.

Maxitype is a collaborative platform founded in 2020 to encourage type design research. The team includes designers and studios connected by the common aim of creating, promoting and distributing new and relevant typefaces. We offer retail and bespoke typefaces, paying special attention to contemporary visual languages and historical knowledge. The current version of the platform (1.1) was released in January 2022. Subscribe to our newsletter for occasional news and access to early trials.
